

ERBE ELEKTROMEDIZIN GMBH

Since 1851 – a strong and innovative group of companies.

As a family-owned and operated business, Erbe develops, manufactures, and markets medical technology systems for professional use across various disciplines worldwide.

Since its founding in 1851, the company has continuously evolved, adapting to changing clinical needs in fields such as gastroenterology, general surgery, gynecology, pulmonology, and urology. The product portfolio includes devices and instruments for electrosurgery, vessel sealing, plasma surgery, cryotechnology, hydrosurgery, and imaging.

Over the past ten years, sales have increased by 75%, and the workforce has more than doubled to over 2,000 employees globally. Today, the group is represented in 110 countries through its own sales and service units, production sites, and an international distributor network.

A team of more than 300 employees is dedicated to research and development. Close collaboration with leading physicians from medical faculties and hospitals plays a key role in helping Erbe drive medical innovation forward.
